

1 September 2009

Motorhome-World has aquired an extensive order from ESKOM to manufacture 4WD fiber-optic repair vehicles that are to be implemented in their respective fields.

“Based on the existing Discoverer X concept with certain adaptions and modifications makes this the ideal vehicle to do a job anywhere even when access roads are poor or non-existent” according to Dennis, MD of Motorhome-World.

The uniquely constructed Polypropylene honey comb side walls and roof will add strength and weight savings where needed as well as providing longevity and enduring quality. This very construction method has been used in all our products for the last 5 years.

Eskom is to be made proud owners of these vehicles, and their deliberate choice of Nissan Patrol Pick-up chassis will ensure their vehicles deliver everytime.
