PRESS RELEASE

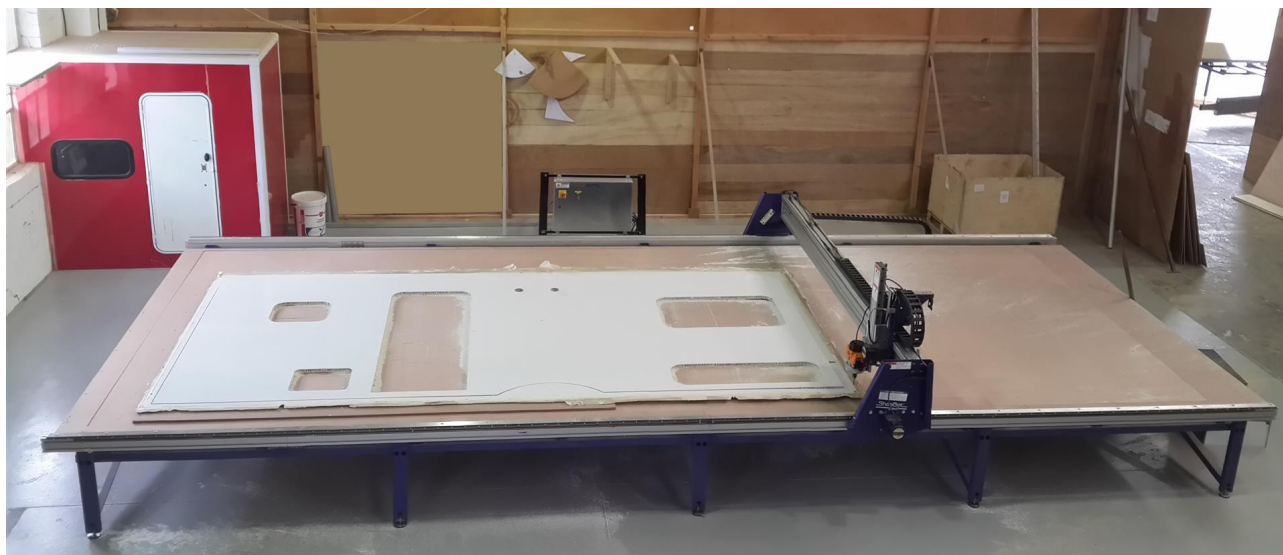

Re: New CNC machine acquisition

Motorhome-World has recently acquired a new CNC (Computer Numerically Controlled) machine. This very specialised machine has been imported from the U.S.A. to cut and manufacture the latest technology sandwich panels and other furniture parts for our Discoverer range of motorhomes. Previously, all these items were cut and manufactured on our own jigs or made by hand.

The CNC router machine has a cutting bed of 2.8m by 6.8m. This enables us to process very large sandwich panels on the new machine. With this investment, Motorhome-World will be able to produce better and more consistent quality parts to be used in the assembly of our motorhomes. It will allow for a quicker turnaround time between new designs, improvements in these said designs and actual production of the parts. This acquisition brings Motorhome-World closer to actual end-to-end component design. There will be a more efficient process between the stages of designing on the 3D software and the actual assembly of the proposed layout.

In the long run this machine will allow Motorhome-World to stay at the top end of Motorhome / Caravan and Trailer technology and still have a very competitive strategic edge in its products.

About Motorhome-World

Motorhome-World is one of South Africa's leading motorhome manufacturers and supplier of quality market related products. Motorhome-World has offices in Kempton Park - East Rand, Atlantis - Cape Town and Windhoek - Namibia. The factory and head offices are located in Atlantis, Cape Town. More information can be found on its website, www.motorhome-world.com
